PROFESSIONAL SUMMARY

- Data Scientist with 3+ years building end-to-end analytical workflows across agriculture, insurance, retail, healthcare, and public sector domains, translating complex findings into decision-ready recommendations for non-technical stakeholders.
- Proficient in Python (Pandas, NumPy, SciPy, Statsmodels, Scikit-Learn, Matplotlib, Seaborn) and SQL, with hands-on experience in statistical inference, predictive modeling, A/B testing, and reproducible pipeline development from ingestion through validation and reporting.
- Recent experience evaluating and ranking AI model outputs (coding tasks, prompt design, response quality) across multiple LLM evaluation platforms, applying structured rubrics for truthfulness, instruction-following, and helpfulness.

EDUCATION

Ladoke Akintola University of Technology

Bachelor Of Technology (BTECH) - Marketing and Management Sciences

Oyo, Nigeria

June, 2021

SKILLS SUMMARY

Programming Languages: Python, SQL (Microsoft SQL Server, MySQL)

Data Science & ML: Pandas, NumPy, SciPy, Scikit-Learn, Statsmodels, Feature Engineering, Statistical Inference, Predictive Modeling, Regression, Classification, Clustering

Data Analytics: Power BI, Tableau, Excel, DAX, KPI Modeling, Dashboard Development, Reporting Automation, Matplotlib, Seaborn, Plotly

Web Scraping & Automation: BeautifulSoup, Selenium, Requests, Dynamic Content Extraction and static web sources, HTML parsing, structured output (CSV, JSON)

Database & ETL: SQL, Data Cleaning, Data Validation, ETL Pipelines, Data Quality Assurance

GenAI & Emerging Tech: Prompt engineering, LLM Evaluation, AI output assessment

Development Platforms: Jupyter Notebook, PyCharm, Visual Studio Code

Version Control: Git, GitHub, GitLab, Jira, Confluence

Soft Skills: Technical Documentation, Stakeholder Management, Team Leadership, Cross-functional Communication, Consulting

WORK EXPERIENCE

Data Analyst.

Aug 2023 – Present

National Agricultural Seed Council [NASC]| Abuja.

- Analyzed agricultural seed production datasets using Python, Excel, and SQL, uncovering trends that informed policy decisions and improved seed quality across 20,000+ records.
- Optimized data collection and reporting workflows with Power BI, automating reporting processes and increasing efficiency by 20%.
- Digitalized documentation systems and implemented process automation, reducing administrative processing time and improving operational effectiveness.

AI Data Trainer / LLM Evaluator / AI Data Specialist.

Jan 2026 – June 2026

Mindrift, Surge AI and Alignerr (Contract, Remote).

- Evaluated and ranked multiple AI model outputs against each other across coding and general-response tasks, applying structured rubrics for truthfulness, instruction-following, and helpfulness to produce consistent, defensible quality judgments.

- Wrote and refined prompts to probe model behavior and surface edge cases, and reviewed AI-generated code for correctness, logic errors, and adherence to task requirements across multiple programming contexts.
- Delivered clear, evidence-based written feedback explaining model errors and ranking decisions, supporting model fine-tuning workflows across three concurrent freelance platforms under tight turnaround times.

Data Training and Technology Administrator.

Apr 2025 – May 2026

Society for Family Health [SFH] | Osun and Delta State.

- Trained and supervised 48 personnel on the OneApp Multi Campaign digital platform, achieving 100% data submission compliance.
- Optimized digital data collection workflows including stock tracking, waybill management, and ITN e-token redemption.
- Deployed and maintained campaign IT infrastructure, enforcing data protection protocols and ensuring business continuity.

Data Quality Assessor.

Nov 2024 – Feb 2025

ACHIEVE, Pact | Akwa-Ibom and Kano State.

- Collected and managed large-scale survey data across 14 LGAs using Kobo Collect and ODK, ensuring comprehensive coverage of orphans and vulnerable children's programs.
- Cleaned and validated datasets with Python, Atlas.ti, and Stata, identifying errors and inconsistencies to maintain high data quality and completeness.
- Generated actionable reports and provided real-time technical support to field teams, optimizing data collection workflows and supporting evidence-based program decisions.

PROJECTS

Customer Churn Prediction Pipeline

Tools: *Python, ScikitLearn, Statsmodels, Pandas, NumPy, Matplotlib, Seaborn* | [GitHub Repository](#)

- Built an end-to-end ML pipeline on 7,043 telecom customers, engineering features including tenure segmentation and average monthly spend, then training and comparing Logistic Regression, Random Forest, and Gradient Boosting models — achieving 85% ROC-AUC on the best model.
- Applied statistical inference using Statsmodels Logit to confirm significance of all top churn drivers ($p < 0.05$), extracting odds ratios and coefficients to translate model outputs into business-interpretable findings.
- Segmented 959 high-risk customers (averaging £81/month, 6.9 months tenure) using probability scoring, delivering actionable retention recommendations including contract upgrade offers and onboarding incentive strategies.

Web Scraping & Retail Analytics — Python Automation

Tools: *Python, BeautifulSoup, Selenium, Requests, Pandas, Matplotlib, Seaborn* | [GitHub Repository](#)

- Engineered a scalable web scraping pipeline using Python, Requests, and BeautifulSoup4, extracting data across 50+ categories with dynamic pagination handling.
- Conducted exploratory data analysis revealing pricing distribution patterns and availability gaps, providing actionable insights for inventory management.
- Cleaned and structured data using Pandas, exporting to CSV and JSON formats with automated timestamps.

A/B Test: Customer Retention & Revenue Optimization

Tools: *Python, SciPy, Stats-models, Pandas, NumPy, Statistical Inference* | [GitHub Repository](#)

- Designed and executed a fully reproducible, end-to-end A/B testing framework (20,000 simulated customers) to evaluate the impact of a 15% discount strategy on churn reduction, applying two-proportion z-tests and independent t-tests with fixed random seeds for deterministic reproducibility.
- Built multi-scenario revenue impact models to quantify trade-offs between retention and profitability, identifying segment-specific ROI differences across High-, Mid-, and Low-CLV customer tiers using Stats-models regression analysis.
- Produced an executive-ready consulting report translating statistical findings into targeted discount strategy recommendations, optimizing retention while preserving net revenue — demonstrating full pipeline coverage from data simulation through insight extraction.

Agricultural Performance & Climate Impact Analysis

Tools: *Python, Power BI* | [GitHub Repository](#)

- Developed an end-to-end environmental impact analysis on agricultural yield using Python (Pandas, NumPy, SciPy), applying statistical testing (independent t-test) to compare crop performance and quantify yield differentials between crop categories.
- Analyzed climate-related features (temperature range, rainfall variability, elevation, soil pH, pollution index) to identify key environmental drivers influencing yield distribution and variability across field-level data.
- Developed an interactive Power BI dashboard with KPI modeling in DAX, translating statistical findings into decision-ready insights for climate risk assessment, resource optimization, and precision agriculture strategy.

Super Store Sales & Profitability Analytics

Tools: *Python (Pandas, NumPy, Matplotlib, Seaborn), Power BI, Git* | [GitHub Repository](#)

- Built an end-to-end data pipeline in Python to ingest, join, and transform multi-sheet retail data (Orders, Returns, Users), engineering derived features including profit margin, discount tiers, loss-making order flags, and time intelligence fields for downstream analysis.
- Conducted exploratory data analysis to identify structural profitability risks across 1.92M in sales, uncovering that 49% of orders were loss-making and that aggressive discounting was the primary driver of negative profit margins.
- Developed a four-page interactive Power BI dashboard delivering executive KPIs, regional profitability mapping, discount-vs-profit scatter analysis, and a high-risk order monitoring table; translating analytical findings into actionable governance recommendations for discount thresholds and portfolio optimization.
